CPRE Factsheet

Requirements Modeling Practitioner | Level 2

Professionalize your RE practice in modeling requirements

Target group

People from RE, business analysis, business engineering, software architecture, software- and system development, systems engineering , and other departments who want to deepen their knowledge about requirements modeling.

Prerequisites

CPRE Foundation certificate or BCS Practitioner certificate in RE.

The module provides comprehensive knowledge and skills:

- describe user functions and the associated system behavior up to detailed requirements unambiguously and easy to read
- specify information structures and conceptual systems simply, understandably, and unambiguously
- use modeling views for software-based systems to master requirements
- supplement textual requirements with graphical models in a purposeful way
- understanding what is important in graphical models and when they are used to represent requirements for complex systems

Exam

75-minute multiple-choice test with approx. 20 questions
